

TS-13-10

Product Information

TS-13-10

13.3" NetvioGo Touch Panel Controller

- Streamlined installation with single category cable setup, encompassing networking and power.
- Standard (IEEE802.3af) PoE | 13W Max. draw.
- Wi-fi enabled for wireless operation.
- Latest ARM Quad-Core Processor.
- Latest Android 12 operating system.
- Pre-loaded NetvioGo license-free audio-video control platform.
- Centralized control over advanced video switching, content source inputs, and display control, including video walls.
- Extended control of third-party audio amplifiers, facilitating multi-zone and multi-amplifier applications.
- Use as a decoder-less video display, with on-screen source content control.
- Open platform allowing other third-party landscape applications to create a comprehensive building control interface.
- Choose from a range of mounting options, including wall fixings, or Netvio's TP-MT-10 for countertop applications.

Application

Netvio's TS-13-10 13.3" PoE Touch Panel is the ideal interface for bustling venue applications such as bars, restaurants, and dynamic work and learning environments. Serving as a robust central control point, it offers seamless connectivity via a single network cable for both power and network, or can be utilized as a convenient Wi-Fi enabled interface.

Mounting options are versatile and a convenient with a removable plate for easy wall mounting.

Additionally, the TS-MT-10 by Netvio enables convenient countertop use, while the rear panel design ensures compatibility with a wide range of 100mm pitch display mounts.

Detachable rear plate
& LAN port.

Overview

Designed to seamlessly integrate NetvioGo AV Control and other third-party applications for a comprehensive user experience, for AV and smart building functions.

Pre-installed with NetvioGo, the revolutionary license-free AV control application, the TS-13-10 can be installed in minutes with little configuration. Engineered as a PoE hardwired network device, it serves as a robust central control hub across diverse venue applications.

Powered by the latest ARM quad-core processors and Android 12 operating system, the TS-13-10 delivers fluid user interaction, showcasing the NetvioGo AV interface at its finest.

Experience the finest video control interface available including intuitive touch-and-tap controls, managing video, across multiple displays applications including video walls.

Going beyond video, both NetvioGo and the TS-13-10 now offer control capabilities for a variety of third-party audio brands, including multi-zone, multi-amplifier applications establishing Netvio as the premier license-free solution for both audio and video.

Value Proposition

- The TS-13-10 is an alternative approach to adopting control via a traditional control system for applications that do not have the budget, complexity or functionality.
- Netvio removes a complete layer of cost, complexity and integration as there is no direct requirement for a dedicated control system processor, interconnects or software licenses.
- The combination of Netvio license free applications and the open nature of the TS-13-10 provides the opportunity to combine numerous applications in pursuit of comprehensive control of venues.

Compatibility

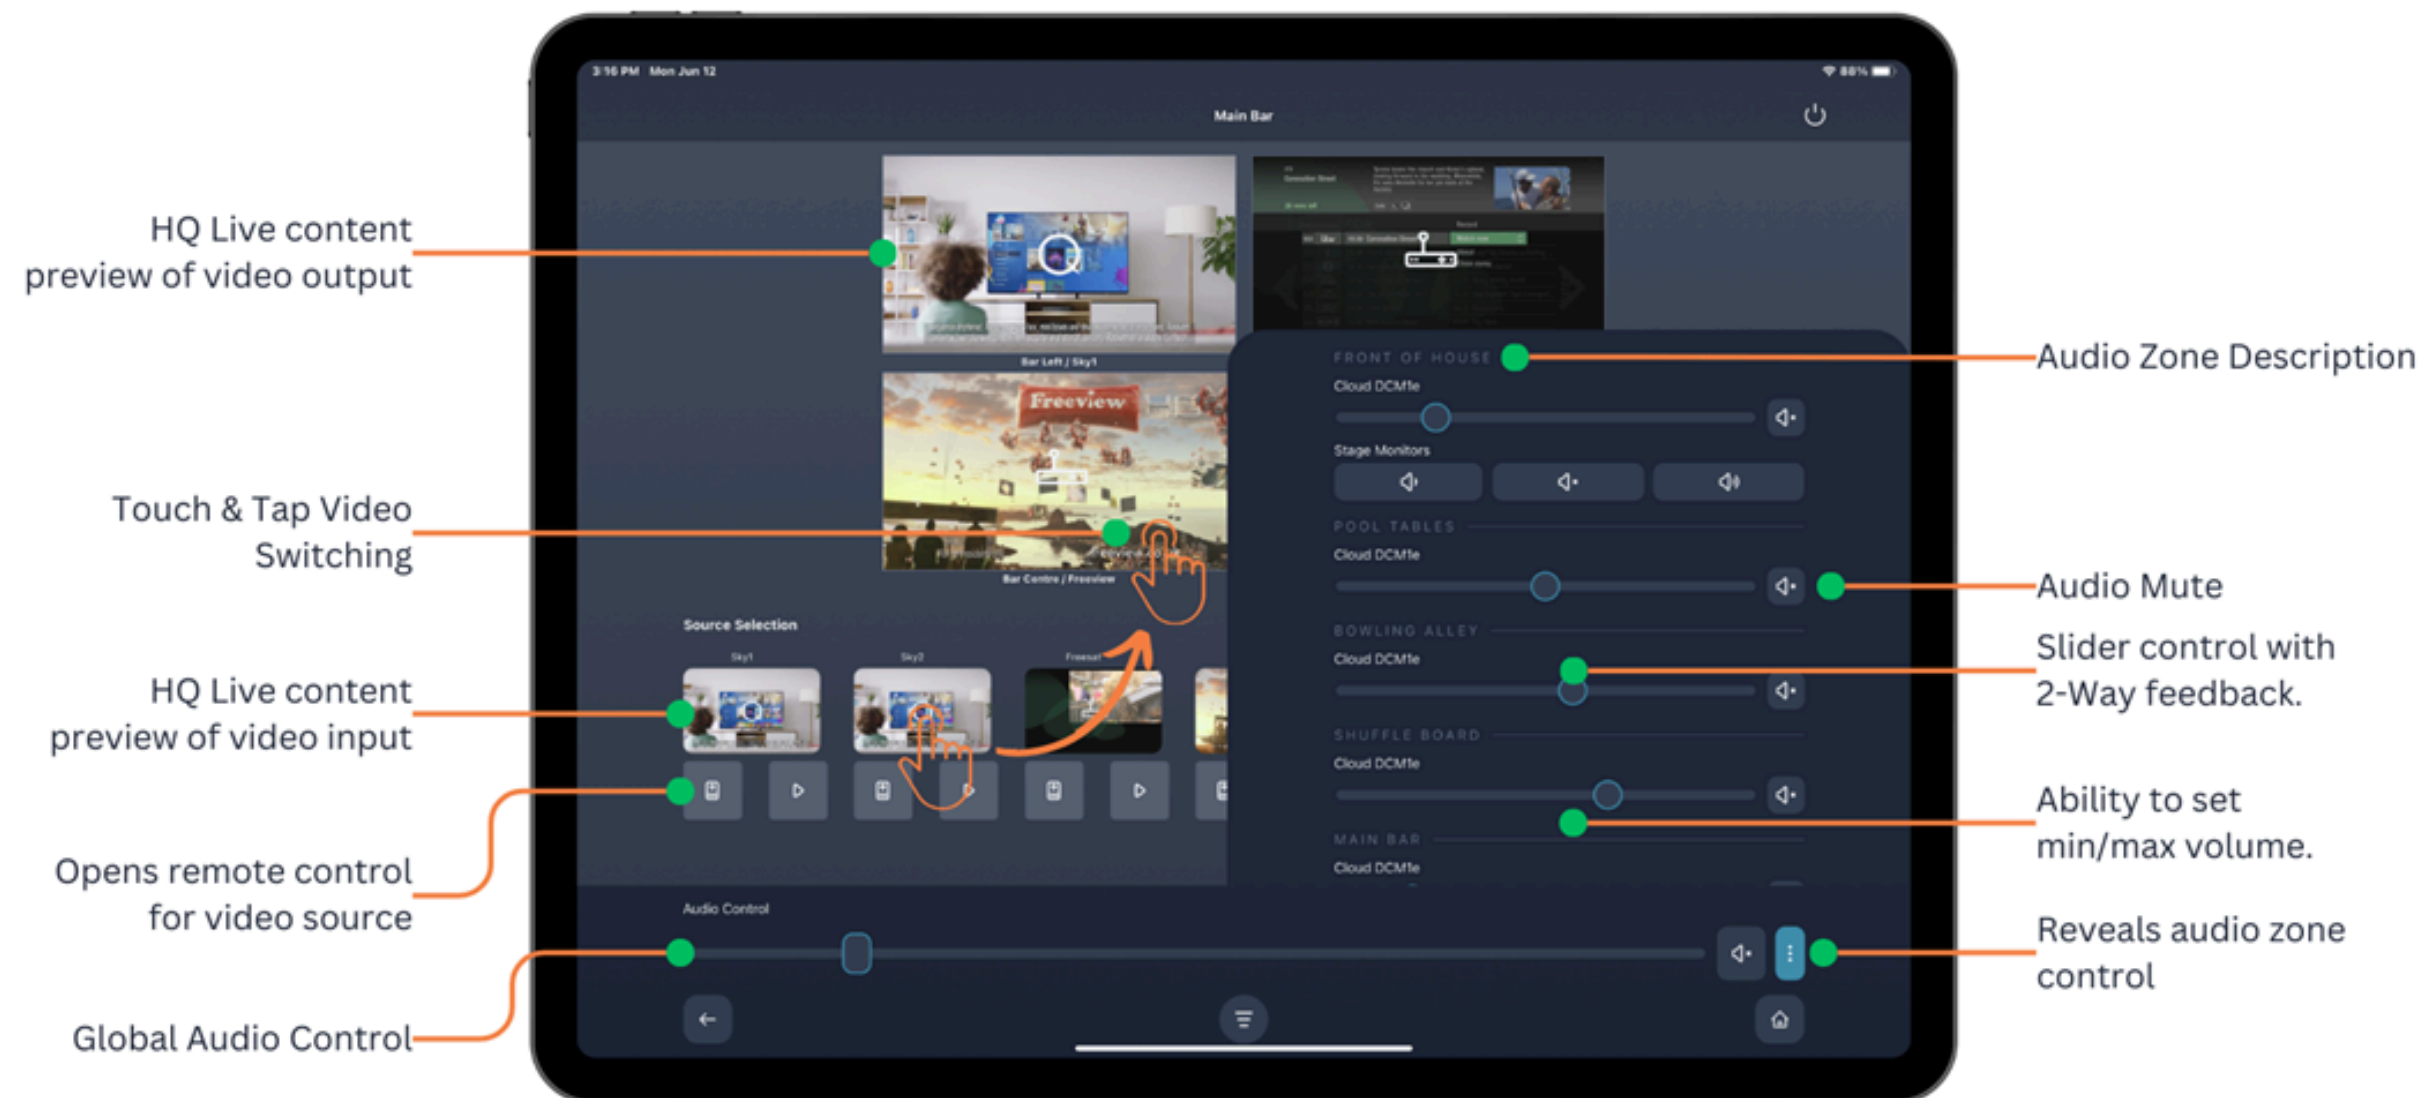

- The TS-13-10 can be used with various Netvio content distribution solutions such as H2, HT2 & JP4 Series products. NetvioGo application functionality differs according to Netvio product solution.
- For example, JP4 AVoIP solutions provide multi-stream capabilities which provide embedded high-quality user interface content derived from HDMI input sources.
- H2 and HT2 Matrix devices are single stream solutions, therefore do not provide live content streaming within the NetvioGo application. Live content is replaced by visually engaging full motion video art relevant to source content.
