Meet the Future

Revolutionary. Intelligent.

When meeting face to face, we are able to look directly at each other at eye level. As we enter a new era of hybrid work with accelerated usage of video meetings, the current video conference equipment has not yet caught up.

- Meet virtually at an **eye-level**, front-facing position.
- Produce the **360° panoramic** view with minimal distortion.
- Create immersive video experience with **AI-powered facial tracking**.
- Adjust **video layouts** based on different types of meeting purposes.
- **Capture your voice** clearly from the center of the table.
- Simply as to **plug-and-play** for your laptop.
- Completely **hassle-free control** - no software, no app required.

Improve meeting equity and exclude no one from the conversation with dedicated close-up shots for everyone in the room. Increase interpersonal interaction by delivering the most vivid and inclusive video for remote participants.

Meet the future. **innex cube**

-  4-Camera Lens
-  4K 360° Panorama
-  AI Built-in
-  Multiple Facial Tracking
-  Multi-Video Modes
-  Control Buttons
-  Remote Control
-  Omnidirectional Mics
-  Extendable Stand

The name says it all - Innex Cube is eye-catching with its compact, elegant design. A superb touch - an anodized finish to complete its high-end metallic look with smooth surfaces.

The detachable poles and a red oak base position the lens 30cm/12 inch above the table, which emulates the most true-to-life, eye-contact view in any video call.

Four camera lens, dual omnidirectional microphones, and a state-of-the-art AI tracking technology- every piece of brilliance is adapted into a delicate, palm-sized camera.

**Compact. Minimal. Desirable.
Best-in-Class Conference Cam**

Flexible for Your Space

The camera lens should be positioned at the eye-level height to capture the faces perfectly. With three detachable poles that can be flexibly assembled to adjust the camera to different heights, you can take your Cube to a variety of meeting locations and still keep that perfect eye-level shot.

Position the camera lens at the 30cm/12" height with two poles for the typical meeting room table or quickly add an extra pole to elevate the lens to 42cm/16.5" for any shorter table.

Ultimate Panoramic View. Ultra 4K Clarity.

More cameras equal better clarity. Innex Cube features four 5MP cameras and the most advanced, distortion-free real-time stitching algorithm to capture every participant in the room, and produce a truly immersive 360° field of view in 4K clarity.

Contrary to the traditional webcams, Cube uniquely sits in the middle of the table and captures faces vividly in proximity.

In comparison to fisheye or dual-lens camera devices, Cube brings true-to-life video, minimal distortion, no blur.

Capture Your Voice, Naturally

In the face-to-face meeting, we don't listen to people's conversation from far away. Innex Cube captures your voice from the center of the table, a more natural and ideal position for better audio. With dual omnidirectional microphones built-in, every word can be heard clearly, ensuring a smooth meeting flow for every participant.

Intuitive and Handy Camera Control

Designed for anyone to use Cube's AI functionalities with ease!

All the video modes require no software nor app installed in your computer or smartphone. With the intuitive buttons and arrow keys, you can customize your video to fit your meeting space.

Just like using your TV remote control, the on-screen display ensures everyone to become an instant expert with Innex Cube.

No Fuss.
Just like TV!

As the meeting goes on, there's always an unexpected moment that you will need to quickly turn off the camera or the microphone. Innex Cube's cam & mic buttons let you quickly react at the most crucial moment, without desperately searching for the software menu bar that sometimes disappears.

Immersive, Inclusive, Easy to Use

Collaborate in a more immersive way. No matter how the seats are arranged in the room, everyone can be clearly captured in the video. The AI-enabled facial tracking allows participants to freely walk in the room while still be perfectly included in the shot.

No software, no app. The most intelligent conference cam.

Take Video Meeting to the Next Level

Combining the advantage of physical and virtual meeting together, Cube helps to create the meeting that everyone feel included and be more willing to participate.

With the customizable view angle and the AI tracking modes, Cube can serve various sizes of the meeting space and the crowd. From a huddle space with a small table, to a mid-size meeting room designed for 6-8 people, even a management office where the team sit at the opposite side of the manager, Cube can be the perfect solution.

Meet the future!

Specifications

Camera

Lens Resolution	5 Megapixels
