

A photograph of a metal mold cavity, likely for injection molding. The cavity has a central vertical core and two side cores. A grid of numbered holes (1 through 12) is visible on the bottom plate, used for monitoring temperature or pressure during the molding process.

A close-up photograph of a dark, textured metal plate. The plate features a vertical ribbed pattern and three circular fasteners or rivets arranged in a triangular formation. The lighting highlights the metallic texture and the geometric shapes of the plate.
